# Spider Plant

*Chloropytum species*

Chloropytum are commonly called Spider plants because of their recognizable shape as well as small "spiderettes" that grow and hang off the plant in the Spring.

**Indoor plant**

70°–85°

**Outdoor plant**

55°–95°

## ✓ Success Tips

### Unwrapping your plant:

To help your plant receive the oxygen and water it needs, please remove the plant from it's dirt bag. Do not repot for the first 30 days after it arrives to avoid transplant shock.

### Watering and drainage:

When watering your new plant, remove the grower pot from the eco pot or decorative container and place it over a sink. Allow the plant to drain fully before putting the grower pot back into the decorative container.

## ☰ Care

Easy for beginners and a great starter plant!

## ☀ Light

This plant prefers low to medium levels of indirect sunlight.

## 💧 Water

Let the soil dry between waterings. Don't let it sit in water to avoid rotting.

## 🐱 Pets

Pet friendly.

## Impress your friends with this cool fact

While spider plants with all green leaves can be found, these are the rarest variety. Most commonly, spider plants are found with a white or yellow stripe down the center of the leaves.
